

UNFILLED TURF

Poligras Platinum CoolPlus

★★★★★

THE PERFECT STAGE FOR HOCKEY

Precision, speed, safety – the Poligras Platinum CoolPlus is setting new standards for hockey. Polytan has further improved its Poligras hockey turf, which has been tested to Olympic standards. Using a new texturing technique and a higher stitch density, it has created a grass surface that is ideal for quick, precise play.

PROPERTIES

- High abrasion protection and a cool surface
- Speed and precision thanks to closed surface
- Soft to the touch
- Permanent crimping

UNFILLED TURF

Poligras Platinum CoolPlus

★★★★★

HOCKEY

The familiar Poligras Mega CoolPlus has been enhanced and made ready for series production in a close development partnership with international hockey players and coaches. For instance, the stitch density has been increased to create an even more compact appearance, while the new Polytan PreciTex texturing technology ensures optimum crimping. The result is a multidirectional closed surface that demonstrates unbeatable ball rolling behaviour. The ultra-closed surface also provides a perfect platform for the turf's CoolPlus function, which cools the surface and reduces water consumption.

Both experts and international professional associations alike are impressed by Polytan's tried-and-tested quality. That's why Poligras Platinum has been selected as the official pitch for the hockey events at the 2016 Olympic Games in Rio.

System structure

AREAS OF USE

- Professional hockey facilities and stadiums
- Training facilities

PRODUCT SPECIFICATIONS

- Monofilament turf fibres with approx. 110 µm Fibre thickness
- Exclusive Polytan CoolPlus function
- Exclusive Polytan PreciTex texturing technology
- Exclusive Polytan 100 % PE formulation with ENTANGLEMENT technology
- MultiBack backing construction

Fibre thickness: approx. 110 µm
